

# Refuse Sacks

For general, domestic and trade waste disposal, black refuse sacks and compactor sacks are usually the most cost effective option. The majority of our stock range is produced from high quality recycled materials which ensure that the sacks are both durable and economical. These sacks can be supplied either loose folded in boxes or on a roll depending on your requirement.

To help facilitate recycling schemes, we also hold a wide range of clear and coloured refuse sacks and compactor sacks in stock. This allows companies to easily segregate waste for onward recycling as well as aid in quick content identification when the sacks are removed for disposal. The tinted compactor sacks are ideal for central binning and recycling points within the workplace.

In addition to our stock range, we are also able to offer our customers the option of having a bespoke size, thickness and colour sack produced which can be either plain or printed (registered print or random print). These can be produced from either recycled materials or 100% virgin materials (suitable for food use). This flexibility will ensure that the sack meets any specific requirements our customers have.

We also hold a full range of Light Duty and Heavy Duty Bin Liners in stock for immediate despatch.
